

# Australian Premium Feeds Bindoon

With a family history of producing chaff and feed for livestock and horses Australian Premium Feeds brings a long running knowledge of animal needs along with a modern understanding of nutritional requirements.

Australian Premium Feeds is a West Australian owned and operated Chaff manufacturing business. Our vision for the future is to produce the best quality Chaff and Hay products possible by using state of the art equipment and techniques to produce highly sought after products for both the domestic and export markets.

For quality assurance, all fodder used in Australian Premium Feeds products has been subjected to a compulsory Annual Ryegrass Toxicity (ARGT) and feed test.

- Feed tested for optimum hay quality
  - Products can be transported interstate
  - Traceability guaranteed
  - Non GMO fodder used
- Packaging

Packaging: A fully automated bagging machine is used which ensures the chaff is bagged to a uniform weight and size. The use of a fully sealed, recyclable bag ensures the quality of the chaff is preserved and it's freshness is maintained. The uniformity of the finished product enables ease of transport and maximises storage space. A carry handle on the bag aids with lifting.
